

Motorhome Leveling & Room Extension Systems

Designed for the next level

The ultralight aluminium levelling system for motorhomes

Leading innovation

Motorhome or caravan owners know that comfort counts. Therefore, HPC Hydraulics likes to go a step further. Or rather, one level higher. Our levelling systems provide a simple and quick stabilisation of motorhomes and caravans. Level with just one touch? Prefer manual operation? Customisation needed? We make it all possible.

The fully automatic aluminium HPC levelling system is a good example of our latest innovative developments. A lightweight solution that can withstand heavy loads. Our philosophy applies to both the products and our services. We are fully confident in saying:

HPC Hydraulics, designed for the next level

A matter of comfort

Automatic levelling and stabilisation systems increase the comfort and user friendliness with the single push of a button. Stabilising your vehicle is no longer time consuming or stressful, unwanted movements are a thing of the past, not to mention the numerous other benefits.

How it works

The levelling system is composed of two or four hydraulic aluminium supports, a compact, lightweight pump, thin hydraulic hoses that are easy to conceal, a touchscreen control panel and the required power supplies. The type of vehicle (motorhome, caravan, trailer, etc.) ultimately determines which control and aluminium supports you need. An additional option is the control via smartphone and/or tablet.

For light and heavy vehicles

With our range of aluminium and steel jacks, we can lift and stabilise almost any vehicle. We have systems that can handle a capacity of 30 tons.

Outstanding quality

The hydraulic supports are black anodised and therefore highly resistant to corrosion. The holes in the feet provide excellent drainage. Automatic features are easy to set up (leveling, stabilising and empty water tank mode). Manual operation? Not a problem.

Cross levelling for caravans

Stabilising a caravan may take a lot of extra time. Our solution is simple and fast. It starts with levelling the across axle. Then you can level the sides with the nose wheel. Simply lower the four corner steadies and you're done!

Security and safety

What could be more important than your and other people's safety? You should always be able to go out safely and have the ability to operate the system.

The system features a double action hand pump. As a result, the system can always be operated in any eventuality. No tools are required to operate the handpump.

More space for extra comfort

The levelling system is easy to extend for extra comfort. Slide-out systems enable more opportunities for your vehicle by creating space. An extra lounge for your motorhome, more selling space ... it's all possible!

You can take full advantage of the system and the lightweight pump. Our modular construction makes it easy to add functionalities. From a hydraulic stairs to a bay window (slide-out).

Universal Straight Out (USO)

The solution as an underfloor guiding system is not an option. This USO slide with a four-point linkage guarantees a perfect seal in both open and closed position. And on the outside no technical details are visible! The extension options broaden the vehicle with up to 0.76 metres.

Dual Cylinder

This system is ideal for larger vehicles. It is strong, technically very robust and maintenance-free. The extension and retraction of the bay window is very accurate. The ease of operation is as easy as the operation of the system itself. The extension options broaden the vehicle with up to 1.78 metres.
