Always level

The HPC system has been specially designed to solve existing problems with current leveling systems. The system is made up of four aluminium dual action cylinders, a lightweight pump with components already used in the motor industry, a PLC (computer) and a digital level sensor. The cylinders are powered by small diameter hydraulic hose, which hides away neatly under the vehicle. All this ensures a considerable reduction in weight.

We provide the solution for any vehicle with our four different types of aluminium cylinders. In addition to three straight cylinders we also have a telescopic cylinder, which is ideal for vehicles that have little space.

- Aluminium cylinder starting at 5 kg
- Capacity of a single jack from 3 to 7 tonnes
- Compact mounting
- Straight and telescopic cylinders
- Black anodised casings
- Tilttable foot - up to 12 degrees
- Water and waste run-off
- Feet available in two sizes
- Foot locked on retraction, no risk of movement while driving

The pump is designed specifically for the HPC leveling system and utilises components used in the car industry. This makes the pump light and compact. For safety reasons the pump is equipped with a dual action manual pump. This ensures that you never need to worry about getting stuck somewhere and not being able to level your vehicle. Operating the manual pump requires no additional tools.

The standard system has a facility to add multiple hydraulic functions for extra comfort. The pump is made up of modular parts, making it easy to build in additional functions. Possible additions are, for instance, hydraulic steps, pop-out loggia, etc...

- High pressure pump
- Low flow, for increased accuracy
- Suited to 12 or 24 volts
- Dual action manual pump

An ultra-lightweight aluminium leveling system for motorhomes

We are the first company to incorporate a PLC (computer) in a leveling system. This makes our system highly flexible and one of the most compact systems available on the market. No more complicated controls or processes to level your vehicle. The display indicates precisely which steps to take and what the next step is. The HPC system can be operated both automatically and manually.

- Automatic leveling with one push of a button
- Retracting cylinders with one push of a button
- Illuminated display
- Small and compact
- Direct control

Because we believe in our product we offer a complete 2-year warranty!

HPC Hydraulics is part of the HWH group, who have specialised in hydraulic systems since 1967. These products include single action cylinders and extendable systems (pop outs) that create more room.

Benefits and advantages of the HPC leveling system

- With just one push of a button your vehicle is level in under two minutes
- Lightweight and extremely compact system
- Proven best price/quality ratio
- Tilttable foot, up to 12 degrees
- Little or no maintenance
- Fully automatic
- Emergency feature
